

CLOG-FREE Tabex® TECHNICAL DATA SHEET

What is Clog-Free?

- ◆ a specially formulated solution designed to clean and maintain liquid chlorine and soda ash chemical-feed reservoirs
- ◆ will clean the reservoir tank from deposits of alkali salts without the need to manually dismantle the systems

How does Clog-Free work?

- ◆ after prolonged use, the chemical feed reservoir will become clogged from the deposits of alkali salts in the system
- ◆ this results in improper addition of chemicals into the pool, spa or hot tub
- ◆ Clog-Free will eliminate this build up of salts by re-dissolving them back into the solution

Dosage Rates

- ◆ for sodium hypochlorinators, add 125 mL of Clog-Free to 50 L of water in the hypochlorinator reservoir tank
- ◆ for soda ash feeders, add 250 mL of Clog-Free to 50 L of water in the soda ash solution reservoir tank
- ◆ always add Clog-Free to reservoir containing water and mix prior to addition of sodium hypochlorite or soda ash
