

FILTER WASH Tabex[®] TECHNICAL DATA SHEET

What is Filter Wash?

- ◆ a concentrated liquid cleanser for use with spa and hot tub cartridge filters
- ◆ increases efficiency of spa filters by dissolving scale, lotion, grease and oils

Why is Filter Wash necessary?

- ◆ the filtration system is responsible for removing visible, undissolved matter from the spa water
- ◆ as the filter operates, debris is trapped and deposited onto the filter media which eventually may become clogged
- ◆ clogging results in ineffective filter runs and sluggish performance by the filter

How does Filter Wash work?

- ◆ comprised of heavy duty acid cleaners and other chemicals which dissolve scale, grease, body oils, lotions and cosmetics from cartridge filters
- ◆ residue is easily then washed away

Dosage Rates

- ◆ add 500 mL of Filter Wash into 10 L of warm water
- ◆ place the filter cartridge in this solution and allow to soak for 12 hours
- ◆ after 12 hours remove the filter from the solution, rinse thoroughly with garden hose, and allow to drain before placing in cartridge housing

****TIP**** purchase two filter elements so that one may be soaking while the other is in use; this way spa usage will not be interrupted

When do I use Filter Wash?

- ◆ should be part of your regularly scheduled spa maintenance program
